

FOR IMMEDIATE RELEASE

NOCUGAS Endorsement Helps Agencies Protect Themselves from Employee Internet Abuse – and the Risks That Go Along With It

The Northern California Users Group of Applied Systems (NOCUGAS), formally announces the endorsement of iPrevision's™ Panoptech Internet Security & Employee Monitoring Solution for their members.

Sacramento, CA. – March 27, 2008 - "After thoroughly researching the Panoptech solution from iPrevision and seeing how valuable this would be to our NOCUGAS Members, the NOCUGAS Board of Directors has decided to formally endorse this very valuable product." Says current NOCUGAS President, and past President of the national ASCNET users group, DeAnna Jarrett.

Megan Ham, current NOCUGAS Treasure and iPrevision customer says, "Gathering information from this product is quick and user friendly. In moments, our office can locate information on an individual's internet use or the use of the entire office. The setup was a simple process and the information gathered almost immediately, has been invaluable. This is such an important tool for our business that it is hard to imagine how we operated without it!"

Just one employee wasting 15 minutes a day on the Internet can cost an agency \$1,500 in lost productivity a year. But the risks go well beyond that. If an employee pirates music or media on company equipment, the agency has legal liability. One such case cost the company \$1.5 million. Spyware and Instant Messaging are becoming the newest routes for malicious attacks and hackers. And, 45% of companies have suffered unauthorized access by an insider in the past 12 months. The fact is, it could happen to you.

The Panoptech™ product creates a log of network activity that agency managers can choose to view in a variety of ways. "Senior agency managers can see a list of all the websites visited in a designated time period—ranging from the most frequently hit sites—which we hope will be insurance related—to the least frequently hit," said iPrevision's Corey Woinarowicz, Dir. Business Development. "If they choose, owners can click on the questionable sites and see the users who visited those sites. They can also get a list of users who are most active on the Web during certain periods, and monitor Instant Messages as well."

In short, this affordable, easy-to-use tool gives agencies of all sizes a good handle on something that's difficult to manage. "An employee doesn't go into work every day with the goal of being a cyberslacker. But, they decide to check airfares for an upcoming trip; then book them online—then look at hotels—and then e-mail their spouse about the plans," he said. "Before they know it, hours have gone by. Panoptech™ is not Big Brother. It's a data collection methodology that gives agency owners and managers a coaching tool with real data."

NOCUGAS users who are interested in finding out more about Panoptech™ should first go to the company website at www.iprevision.net to schedule a real-time online demo to get a good idea of how it all works. After receiving the order—at the special 10% NOCUGAS Users' Group negotiated price discount—agents will have the product within three business days.
